

# TriipMate User Flow Chart

User types: Guest New registered user Passenger / traveler Driver Shared account pages

# TriipMate Page Access Matrix

Which user type can visit which page, from where, and where they can go next

This matrix pairs with the flow chart and can be used as a navigation checklist for design, iOS, and backend work.

| User type        | Page            | Function                                                                      | Comes from                            | Can go next                                               |
|------------------|-----------------|-------------------------------------------------------------------------------|---------------------------------------|-----------------------------------------------------------|
| Guest            | Welcome         | Start screen for login or account creation.                                   | App launch when signed out            | Login, Register                                           |
| Guest            | Login           | Existing user signs in with email and password.                               | Welcome                               | Main app tabs, Forgot Password                            |
| Guest            | Forgot Password | Requests reset/verification code.                                             | Login                                 | Verification, Login                                       |
| New user         | Register        | Creates account with name, email, phone, password.                            | Welcome                               | Verification                                              |
| New user         | Verification    | Confirms phone code.                                                          | Register or Forgot Password           | Create Profile or Login                                   |
| New user         | Create Profile  | Adds profile photo, home city/state, gender, age, car ownership, preferences. | Verification                          | Trust Setup                                               |
| New user         | Trust Setup     | Collects trust signals like phone, ID, license, emergency contact.            | Create Profile                        | Role Selection, Main app                                  |
| New user         | Role Selection  | Chooses driver/passenger role in the Phase 1 scaffold.                        | Trust Setup or signed-in without role | Main app/Profile                                          |
| Passenger        | Search          | Searches rides by from, to, date, and seats.                                  | Main tabs                             | Ride Card, Ride Detail                                    |
| Passenger        | Ride Detail     | Reviews trip details, vehicle details, driver note, cost, and trust info.     | Search/Ride Card                      | Message Driver, Request Join, Search                      |
| Passenger        | Request Join    | Asks to join a ride.                                                          | Ride Detail                           | Messages, Ride Detail                                     |
| Passenger/Driver | Messages        | Communication between driver and passenger.                                   | Main tabs, Ride Detail, Request Join  | Ride Detail, Search, Profile                              |
| Driver           | Post a Ride     | Creates a ride with route, date, seats, price, and note.                      | Main tabs                             | Published Ride, Search, Profile                           |
| Driver           | Published Ride  | Ride becomes visible to searching travelers.                                  | Post a Ride                           | Messages, Search                                          |
| Passenger/Driver | Profile         | Shows profile, verification, rating, trips, saved money, settings.            | Main tabs or signed-in scaffold route | Edit Profile, Identity, Payments, Alerts, Support, Logout |
| Passenger/Driver | Logout          | Signs user out and returns to auth.                                           | Profile                               | Welcome                                                   |

Note: the repo currently contains both the richer prototype navigation and a newer Firebase Phase 1 scaffold. This chart documents the complete intended TriipMate frontend flow so product, iOS, and backend work can align.
